

Job Supply Analytics Dashboard

Project Overview:

This project was developed as part of the **PlaceMux Phase 2 - Data Analyst Task 2**. The objective was to track job supply by validating job posting events and creating analytical views to monitor hiring activity across the marketplace.

The project uses **SQL** for data cleaning, validation, and analysis, while **Power BI** is used for creating an interactive dashboard to visualize job supply trends and key business metrics.

Business Problem:

Organizations need visibility into job posting activity to understand hiring demand, marketplace growth, and recruitment trends.

This project aims to answer questions such as:

- How many jobs are being posted?
- Which companies are posting the most jobs?
- What is the trend of job postings over time?
- What skill thresholds are commonly required?
- What proportion of jobs are active versus closed?

Objectives:

- Validate job posting records
- Track overall job supply
- Analysed company-wise hiring activity
- Monitor job posting trends
- Identify skill threshold patterns
- Build an interactive Power BI dashboard for decision-making

Dataset Description:

The dataset contains job posting information including:

- Job ID
- Company Name
- Job Title
- Job Category
- Skill Threshold
- Posted Date
- Job Status
- Other job-related attributes

Project Workflow:

SQL Analysis Performed:**1. Total Jobs Posted**

Calculated the total number of job postings available in the dataset.

2. Active vs Closed Jobs

Analysed the distribution of job statuses to understand marketplace activity.

3. Company-wise Job Distribution

Identified companies with the highest number of job postings.

4. Skill Threshold Analysis

Measured average and maximum skill requirements across jobs.

5. Job Posting Trends

Tracked job posting activity over time to identify growth patterns.

6. Top Hiring Companies

Ranked organizations based on hiring volume.

Dashboard Features:**KPI Cards**

The dashboard includes:

- Total Jobs Posted
- Active Jobs
- Closed Jobs
- Average Skill Threshold
- Total Companies Hiring

Visualizations:

- Company-wise Job Distribution:

Displays organizations with the highest hiring activity.

- Job Status Analysis

Shows the proportion of active and closed jobs.

- Job Posting Trend

Visualizes changes in job supply over time.

- Skill Threshold Analysis

Highlights required skill levels across different jobs.

- Top Hiring Companies

Ranks companies based on job posting volume.

Filters & Interactivity:

Users can filter dashboard data by:

- Company
- Job Title
- Job Status
- Date
- Skill Threshold

This allows deeper exploration of hiring patterns.

Key Insights:

- Identified companies driving the highest hiring demand.
- Tracked marketplace job supply trends.
- Measured average skill requirements across job roles.
- Analyzed active and closed job ratios.
- Generated actionable insights for recruitment monitoring.

Business Impact:

The dashboard enables stakeholders to:

- Monitor hiring activity in real time.

- Track marketplace growth.
- Identify hiring trends.
- Make data-driven recruitment decisions.
- Understand skill demand across job postings.
